Transform Rhode Island Scholarship

"The vehicle doesn't hand students outcomes but provides them with access to tools, a place to learn, and a space to create something real. Access isn't just about tools. Sometimes, it's about the ride there."

~ Evan Perez
The MET High School

BIG IDEA:

Evan's big idea is Mobile Foundry, a creative studio on wheels designed to bring professional tools, ethical AI, and mentorship to Rhode Island students who otherwise wouldn't have access.

Designed to empower, not replace, human creativity, the Mobile Foundry hosts structured sessions on school campuses by day and travels statewide after school to meet students where they live. Inside, students gain access to the tools, knowledge and space to create something real.

HOW WILL HE DO IT?

The Mobile Foundry includes tools that students need: an AI-personalized curriculum, professional creative equipment, and a trained facilitator who drives the vehicle and guides the students in creativity and entrepreneurship.

AI is used to help with pricing, branding, and protecting what the students make.
